                                AZ36228-49 encode bone marrow secreted proteins of human bone marrow stromal cells. The proteins can exhibit cytokine, cell proliferation, or cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells or factor-dependent cell lines, celficiencies. In addition, they may be used to support the growth and proliferation of support the growth and proliferation of myeloid cells such as anaemias. They can have colony stimulating factor (CSF) activity and can consemias. They can have colony stimulating factor (CSF) activity and can anemias. They can have colony stimulating factor (CSF) activity and can consemia, thereby allowing prevention of myeloid cells such as granulocytes, monocytes or macrophages, to prevent or treatment of platelet can platelets, thereby allowing prevention of reatment of platelet disorders such as thrombocytopenia, to support the growth and proliferation of hematopoeitic stem cells, either in place of or in conjunction with platelet transfusions, to treatment of platelet, or to recopulate the stem cell compartment after irradiation or chemotherapy. They can be used for growth or differentiation of bone, cartilage, tendon, ligament, or nerve tissue, as well as for wound healing and tissue repair and replacement, and in the treatment of burns, incisions and ulcers, to induce cartilage and/or bone growth in circumstance where bone is not normally formed and thus have an application in healing bone fractures and cartilage and thus have an application in healing bone fractures and cartilage and thus have an application in healing bone fractures and cartilage damage or defects, prophylactic use in fracture.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PheGlyAsnAspPheValProProAlaProArgGlyPheLeuProAlaAlaProProVal 100

The invention relates to an isolated polynucleotide (1) comprising: (a) any of a group of over 4000 nucleotide sequences (ABY94628-ABY99145); (b) complements of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences having at least 75% or 90% identity conditions; (e) sequences having at least 75% or 90% identity conditions; (e) sequences having at least 75% or 90% identity conditions; (e) sequences having at least 75% or 90% identity conditions; (e) sequences having at least 75% or 90% identity conditions; (a) and oligonucleotide can be used to detect cancer conditions; (b) and oligonucleotide can be used and thindles, fusion proteins, T cell populations and antigen presenting antimumer response. The polynucleotides can be used as probes or primers for nucleic acid hybridisation, in the design and properties and proteins in the tumour cells, in vaccines and for gene therapy. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                        New isolated polynucleotide and pancreatic tumor polypeptides, useful for diagnosing, preventing and/or treating cancer, particularly pancreatic

```
The present sequence encodes a human stress-phosphorylated endoplasmic reticulum protein, designated Nogo B. Nogo B has cytostatic activity and is a modulator of the storage and exchange of calcium, cell growth and cellular stress response. It can: regulate oxidative stress; inhibit neutrite outgrowth, neuron growth and axon regeneration. Nogo B polypeptides and polynucleotides are useful for modulating stress levels and cellular stress-response, cell growth and viability, diagnosis and treatment of cancer, malignant growth and other Nogo B related diseases. Nogo B polypeptides are also useful to screen combinatorial libraries to identify agonist or antagonist. Antibodies against Nogo B polypeptides are useful for affinity chromatography and distinguishing Nogo B polypeptides
                                                                                                                                               Novel protein associated with cell stress response useful for modulating stress levels, cell growth, diagnosis and treatment of cancer and malignant growth and for identifying agonists and antagonists.

This invention describes novel mucleic acid molecules that are associated with apoptosis and encode a polypeptide and are derived from a normalised apoptosis and encode a polypeptide and are derived from a normalised apoptosis measured by cell death detection assay or the CPRG assay (measuring loss of membrane integrity). The products of the invention have cytostatic, neuroprotective, immunosuppressive, antirheumatic, have cytostatic, anticonvulsant, antiparilammetory, hepatotropic, virucide, nootropic, anticonvulsant, antiparkinsonian, vasotropic, creebroprotective and antialcoholic activity and can be used for gene therapy. The polynucleotides also related vectors, hosts (or their extracts), encoded polypeptide (or their receptors) and/or agents that inhibit their activity (including antisense sequences) are used for treatment or prevention of tumours, autoimmune or degenerative diseases and viral infections, rheumatoid arthritis, diabetes, lupus, or infection with hepatitis or influenza viruses, Alzheimer's, Huntington's or Parkinson's diseases, reperfusion injury, stroke and alcoholic liver disease. Detection of the polynucleotides and derived polypeptides can appoproals—second archine described in the disclosure of the choose an experience approaches and derived polypeptides and expense.
                                                                                            New nucleic acids involved in apoptosis, useful for diagnosis and treatment of e.g. tumors and degenerative disease, also related proteins, antibodies and modulators.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a new method of identifying modulators of Nogo function or BACB activity. The method involves providing Nogo and BACB Dypeptides capable of binding with each other, monitoring the interaction between these polypeptides, and determining if the test agent interaction between these polypeptides, and determining if the test agent of settle activity. The method is useful in treating caute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas). Apperpoliferative or dysproliferative disorders (e.g. cirrhosis, psoriasis, psoriasis, keloid formation, fibrocyetic conditions, tissue hypertrophy) of the central nervous system. The BACB polypeptide is useful in screening methods to identify agents that may act as modulators of BACB activity and in particular agents that may be useful in treating Nogo-associated diseases. The modulators of Mogo or BACB polypeptides, and the polynucleotide encoding the BACB polypeptide are useful in especial encoding the treatment or prevention of disorders caponist to the modulation of Nogo activity, in alleviating the symptoms or improving the condition of a patient suffering from this symptoms or improving the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading configuration of assays, a probe, in recombinant protein synthesis, and in gene therapy techniques. The polypution acid sequence encodes the human NogoB protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PheGlyAsnAspPheValProProAlaFroArgGlyPheLeuFroAlaAlaProProVal 100

                                                                                                                                                                                                                                                                                                                                            The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a full length without any special methods. The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         471
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PheGlyAsnAspPheValProProAlaProArgGlyPheLeuProAlaAlaProProVal 100

                                                                                                                                                                                                                                                                               This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential theraspeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.

AARD08345-AAD08394 represent CDNAB corresponding to 50 human secreted protein genes and AAE03898-AAE03947 represent the proteins they encode. AAE03948-AAE03996 represent human secreted protein fragments or variants. CC AAE03948-AAE03996 represent human secreted protein fragments or variants. The genes and their secreted proteins equal for preventing treating or ameliorating medical conditions, e.g., by protein or gene therapy. CC Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the 50 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, tumours, foetal and developmental abnormalities, haematopoietic disorders diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, contivive disorders (e.g., Alzheimer's disease, Parkinson's disease), contivive disorders (e.g., Alzheimer's disease, Parkinson's disease), contivive disorders, schizophrania, asthma, skin disorders (e.g., pregnancy-related disorders, andocrine disorders, and indepense, and continue disorders, and indepense and solve used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, corresponse tissues, to identify their cognate ligands or binding corters, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassay erg., and in the alsorate and in diagnostic and indiagnostic immunoassay erg., and in the alsorate and in diagnostic and indiagnostic immunoassay erg., and in the alsorate and in diagnostic and indiagnostic and indiagnostic and indiagnostic and indiagnostic and indiagnostic and indiagn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding 50 human secreted polypeptides, useful for preventing, diagnosing and/or treating diseases, e.g. Parkinson's disease, botulism, cancers and Scimitar syndrome.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                                                    Use of gene sequence that is down-regulated in response to streptozocin-induced diabetes, vector, host cell, animal, polypeptide and antibody, in screening of compounds for treating or diagnosing pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         regulated in the spinal confine the spinal confine to streptozocin-induced diabetes, or comprising, hybridising or having at least 80% sequence identity to a sequence whose expression products are kinases, phosphatases, ion channel proteins, receptors, transporters, G-protein coupled receptor proteins, DNA-binding proteins, proteases or enzymes, given in the specification. A gene of the invention has analgesic activity, and may have a use in gene therapy. The gene sequences, vector, host cell, animal, polypeptide and antibody are useful for screening of compounds for diagnosing or treating pain. The kits are useful for simultaneous, separate or sequential detecting and/or quantifying down-regulation of a gene sequence in the spinal cord of a mammal in response to streptozocin-induced diabetes. The compound or pharmaceutical composition is useful as a medicament for treating or diagnosing pain. The present sequence represents a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     760
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CGCCCGCCTTCAAGTACCAGTTCGTGACGGAGCCCGAGGACGAGGAGGAGGAGGAGGAGGAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to human MAGI protein, which is similar to neuroendocrine-specific protein. The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleotide is also useful for chromosome localization and for tissue expression studies. The present sequence represents a DNA encoding the human MAGI protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GluGluGluAepGluAepGluAepLeuGluGluLeuGluValLeuGluArglysProAla 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of cDNA encoding human NOGO-A (see AAB82149). NOGO-A is a previously known splice variant of the human NOGO gene on chromosome 2p21. NOGO-A cDNA was obtained by PCR amplification of human spinal cord cDNA. The invention relates to a novel splice variant, NOGO-C (see AAF80121). It provides NOGO-C polypeptides and polynucleotides, and methods for producing such polypeptides by recombinant techniques. Also disclosed are methods for utilising NOGO-C polypeptides and polynucleotides in the treatment of diseases including neuropathies, spinal injury, brain injury, stroke, neuromal degeneration, for example Alzheimer's disease and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions associated with NOGO-C imbalance, and diagnostic assays for detecting diseases associated with inappropriate NOGO-C
                                                                                                        GlnIleAspHisTyrLeuGlyLeuAlaAsnLysAsnValLysAspAlaMetAlaLysIle 361
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOGO-A; human; chromosome 2p21; neuropathy; spinal injury; brain injury; stroke; neuronal degeneration; Alzheimer's disease; Parkinson's disease; neuromuscular disorder; psychiatric disorder; developmental disorder; neuropyrotective; nootropic; neuroleptic; antiparkinsonian; cerebroprotective; neuroleptic; diagnosis; therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               human NOGO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptide designated NOGO-C is a splice variant of the human NOC gene and may be useful in the treatment of neural disorders including Alzheimer's and Parkinson's diseases.

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE proprieties capable of binding with each other, monitoring the interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating caute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas). peripheral nerve damage, and in neoplastic (e.g. glioblastomas, contribusis, psoriasis, keloid formation, fibrocystic conditions, tissue hypertrophy) of the central nervous system. The BACE polypeptides is useful in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may be useful in treating now associated diseases. The modulators of Nogo or BACE polypeptides, and the polymucleotide encoding the BACE polypeptide are useful in manufacturing a medicament for the treatment or prevention of disorders responsive to the modulation of Nogo activity, in alleviating the symptoms or improving the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading of assays, a probe, in recombinant protein synthesis, and in gene therapy techniques. The present nucleic acid sequence encodes the human NogoA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   185
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                360

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and BcoRV sites of the pCWVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /rissue type="PLACENTA"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Unamylitical 'im',

/note="Organ: Eye; Vector: pSportl; RNA was extracted from primary human pericytes in culture. A directionally cloned cDNA library in the pSPORT1 vector (invitrogen) was constructed at Bioserve Biotechnology (Laurel ND) essentially following the protocols of the SuperScript Plagmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5'-pGACTAGATCAGGAGGGCCCC(C7)15-3']. CDNA was cloned in Not 1/Sal I sites. EST analysis was performed at the NIH Intramural Sequencing Center (NISC)."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
